

TPG Telecom brings business-grade satellite connectivity to the bush

13 April 2022 – TPG Telecom is delivering a major broadband boost to some of the hardest-to-reach regions of Australia with the launch of business-grade nbn™ satellite internet.

Tapping into the nbn™'s business satellite services (BSS), TPG Telecom is now offering businesses high bandwidth connectivity with enhanced service levels across the Australian mainland, Tasmania and various surrounding large islands.

“This is a huge lift in coverage for our enterprise customers and means no matter where you are on the land in Australia, we may be able to provide the speed and capacity your business needs to stay connected and productive,” said Tom Sykes, TPG Telecom Head of Product – Enterprise, Government & Wholesale.

“Remote businesses with remote sites may now have the ability to access enterprise-grade connectivity which could unlock a new world of possibilities through the internet of things, more efficient safety and monitoring tools, automation, cloud services and critical business applications.”

Launched as part of a new suite of enterprise services, TPG Telecom will make its Business Satellite Internet services available to organisations across Australia, with sectors including government, mining, energy, manufacturing, logistics, and healthcare set to benefit most from the new connectivity.

“Whether you’re operating a renewable energy hub in the middle of the Nullarbor or helping deliver essential telehealth service to remote communities in outback Australia, we have the connectivity solution for you,” said Tom Sykes.

TPG Telecom’s Business Satellite Internet is available with a choice of four high-value data packs offering data allowances up to 1,000GB a month.

Customers can also choose between three assurance service level options, as well as three bandwidth speed option. Additionally, the Business Satellite Internet can be deployed as an alternative connectivity option for customers searching for redundancy solutions to complement existing fixed connectivity. TPG Telecom monitors its services 24x7 via its managed services operations centre.

TPG Telecom’s Business Satellite Internet is a fully managed connectivity service delivered via NBN's Sky Muster satellite. The satellite uses 84 spot beams to cover mainland Australia and Tasmania as well as five major islands including Christmas, Lord Howe, Norfolk, Cocos and Macquarie Islands.
